КАФЕЛРА	Компьютерные системы и сети

Отчет

по Лабораторной работе № 6

Вариант № 16

Дисциплина: Языки интернет программирования

Название домашней работы: Анализ линейной электрической цепи постоянного тока

Студент гр.	ИУ6-34		_ Лавренов И.С.

Задание

Часть 1

Организовать итерацинный цикл. Вычислить длину окружности с точностью 0.001, 0.0001 как предел последовательности периметров вписанных правильных многоугольников с удваивающимся числом сторон (начинасть с 6). Использовать формулу удвоения стороны a_{2n} =sqrt($2R^2$ - 2R*sqrt(R^2 - a_n^2 /4))

Часть 2

Решить предыдущее задание с помощью enumerator.

Часть 3

Найти минимальный положительный корень уравнения с точностью до 0.0001

Уравнения: $x^2+\sin(x/2)=0$ Arctg(x)+x=1

Часть 1

Ko∂ interface.rb

```
require_relative './main.rb'

print 'Input precision le-3 or le-4: '

Рис. 6. Выполнение теста

Вывод

Было создано 3 консольных ruby приложений по выданному условию. Все программы имеют тесты. Приложения протестированы и работают верно.
